

ENVY LASHES LONDON

How to Become a Lash Technician in the UK

A quick professional guide to lash technician training, accreditation, insurance and client safety.

www.envylasheslondon.com

1. Industry Basics

Lash extensions are precision beauty treatments performed close to the eye. Because adhesives and tools are used, proper training, hygiene and insurance are essential for professional practice.

Accreditation vs Licensing

There is currently no specific government licence required for lash technicians in the UK. Instead, technicians complete accredited training recognised by insurance providers and beauty industry organisations.

2. Lash Training Pathway

- Classic Lash Training – one extension applied to one natural lash (foundation skill)
- Hybrid Lashes – mix of classic and volume techniques
- Volume Lashes – multiple ultra-light lashes applied for fuller looks
- Advanced courses – LED lash curing, lash lift & tint, brow treatments

3. Accreditation Bodies

Organisation	Purpose
ABT	Beauty accreditation and insurance provider widely recognised in the UK.
VTCT	Ofqual regulated vocational beauty qualifications.
CPD	Continuing professional development recognition.
BABTAC / Beauty Guild	Professional organisations offering insurance and membership.

4. Insurance Requirements

- Professional Liability – covers claims relating to treatments
- Public Liability – protects against accidents involving clients
- Product Liability – covers reactions to products used
- Equipment Cover – protects tools and kit

5. Patch Testing

- Use the same adhesive intended for the treatment
- Follow manufacturer instructions carefully
- Record patch tests within the client consultation process

Lash Technician Compliance Checklist

- Complete accredited Classic Lash training
- Progress to Hybrid or Volume training if offering advanced services
- Pass a live model assessment
- Receive an accredited certificate
- Obtain professional and public liability insurance
- Carry out patch tests for every client
- Use consultation forms and provide aftercare guidance
